

Türkiye Parazitoloji Dergisi

TURKISH JOURNAL OF PARASITOLOGY

EDITORIAL

We present you the third issue of 2017 with a total of 12 studies including 8 original research articles, 3 case reports, and 1 review.

Of the original research articles, one is about the diagnosis of trichomoniasis, which is a disregarded issue, in male patients. Two articles investigate the seroprevalence of neosporiasis in cows and toxoplasmosis in sheep. And another original article is about *Demodex* infestation, which is more frequently encountered. Moreover, there is an article explaining the cryopreservation of *Leishmania* and the methods that can be used as *in vivo* and *in vitro* in scanning active agents for the treatment of malaria. In the last original article, the effects of two endemic plants on *T. gondii* are investigated. In addition to the original research articles, 3 different cases are presented in detail.

It has been noticed that while loading the articles on the system, some problems related to the forms that must be submitted with the article materials are encountered. All of these forms can be reached in the tab of "Instructions for Authors" on the website of our journal. I would like to emphasize on this point because complete submission of these forms while loading an article will shorten the process.

I would like to restate that making citations from the articles in our journal for the studies that will be published in the journals included in the SCI/SCI-Expanded is very important during the application process of our journal to this index. I present you my respect hoping that this issue of the "Turkish Parasitology Journal", which is one of the most important components of our scientific field and one of tools that strengthen us, will contribute to your scientific works and knowledge.

Prof. Dr. Yusuf Özbel
Chief Editor
